

KOFI AMPOMAH

Governance, Risk & Compliance | AI Governance | Data Privacy
Tuscaloosa, AL • (659) 261-9270 • kampomah@crimson.ua.edu
linkedin.com/in/kofi-ampomah • github.com/Ampomah-Kofi • ampomah-kofi.github.io

SUMMARY

Computer Science PhD researcher in usable security and privacy, focused on AI governance, third-party risk (TPRM), and privacy assurance. Audited 23,000 third-party integrations against a 31-theme privacy taxonomy and completed a full-cycle NIST CSF 2.0 assessment — risk register, control review, POA&M, and executive reporting. Seeking a Summer 2027 GRC internship.

CORE COMPETENCIES

Risk Assessment • Third-Party Risk • Vendor Due Diligence • Control Mapping • Privacy Impact Assessment • Audit Evidence • Policy Analysis • Risk Registers • POA&M • Remediation Tracking • Threat Modeling • AI Governance

EXPERIENCE

Graduate Research & Teaching Assistant | *UA SPECTRAL Lab, The University of Alabama, USA* Aug 2025 – Present

- Designed BotLens, a repeatable privacy auditing framework covering 23,000 third-party Discord bots and 183,142 user reviews, surfacing disclosure, data-sharing, access-control, and security concerns.
- Created a 31-theme security and privacy taxonomy and automated Python evidence pipeline; manually validated 8,832 flagged records and documented criteria, evidence sources, and limitations.
- Translated technical findings into documentation, figures, and reviewer responses for technical and non-technical audiences; led Computer Networks labs.

Large Language Model Researcher | *Datamaker GH* Jan 2024 – May 2024

- Applied structured labeling protocols, validation rules, and quality checks to multilingual LLM datasets, maintaining auditable records of data issues and label corrections.
- Flagged recurring annotation inconsistencies and escalated them to reviewers, improving dataset traceability.

Teaching Assistant & Data Analyst | *Ghana Communication Technology University* Jan 2022 – Sep 2023

- Built Excel dashboards tracking system availability and performance metrics, giving IT staff weekly visibility into recurring failure points.
- Supported database performance tuning and disaster recovery planning that reduced academic system downtime by 25%.

GRC & PRIVACY PROJECTS

KAA HealthShield NIST CSF 2.0 Assessment | *Independent Portfolio Project* | [GitHub](#) Aug 2026

- Completed a NIST CSF 2.0 cyber risk and controls assessment for a fictional healthcare SaaS company covering AWS, IAM, patient data, third-party services, AI governance, incident response, and recovery.
- Assessed 12 technology assets and developed 15 cause-and-consequence risk scenarios with inherent and residual risk, owners, treatments, due dates, and remediation priorities.
- Built Current and Target Profiles, a Tier assessment, control review, evidence plan, BIA, vendor assessment, POA&M, executive dashboard, and leadership memo.

MCP Marketplace Privacy-Label Validator | *Independent Research Project* | [GitHub](#) Aug 2026 – Present

- Developing auditable completeness and consistency checks for privacy disclosures in AI marketplaces, explicitly evaluating AI agent tool choices and how models respond to neutral marketplace descriptions.
- Assessing data collection, third-party sharing, authentication, data retention, and encryption to support safe AI adoption.

EDUCATION

PhD, Computer Science | The University of Alabama | *Usable Security, Privacy, AI Security* | **GPA 4.00/4.00** Expected Dec 2030

MS, Computer Science | University of Ghana | *Best ML with Big Data Analytics Student* Aug 2024

BS, Computer Engineering | Ghana Communication Technology University | *First Class Honours* Jul 2022

Relevant graduate coursework: Computer Security • Software Security • Security & Privacy of Machine Learning • Human-Centered Privacy • Computer Communications & Networks
